

«FREMTIDENS OMSORGSBOLIG»

Bettina S. Husebø
Senter for alders- og sykehjemsmedisin
Universitetet i Bergen

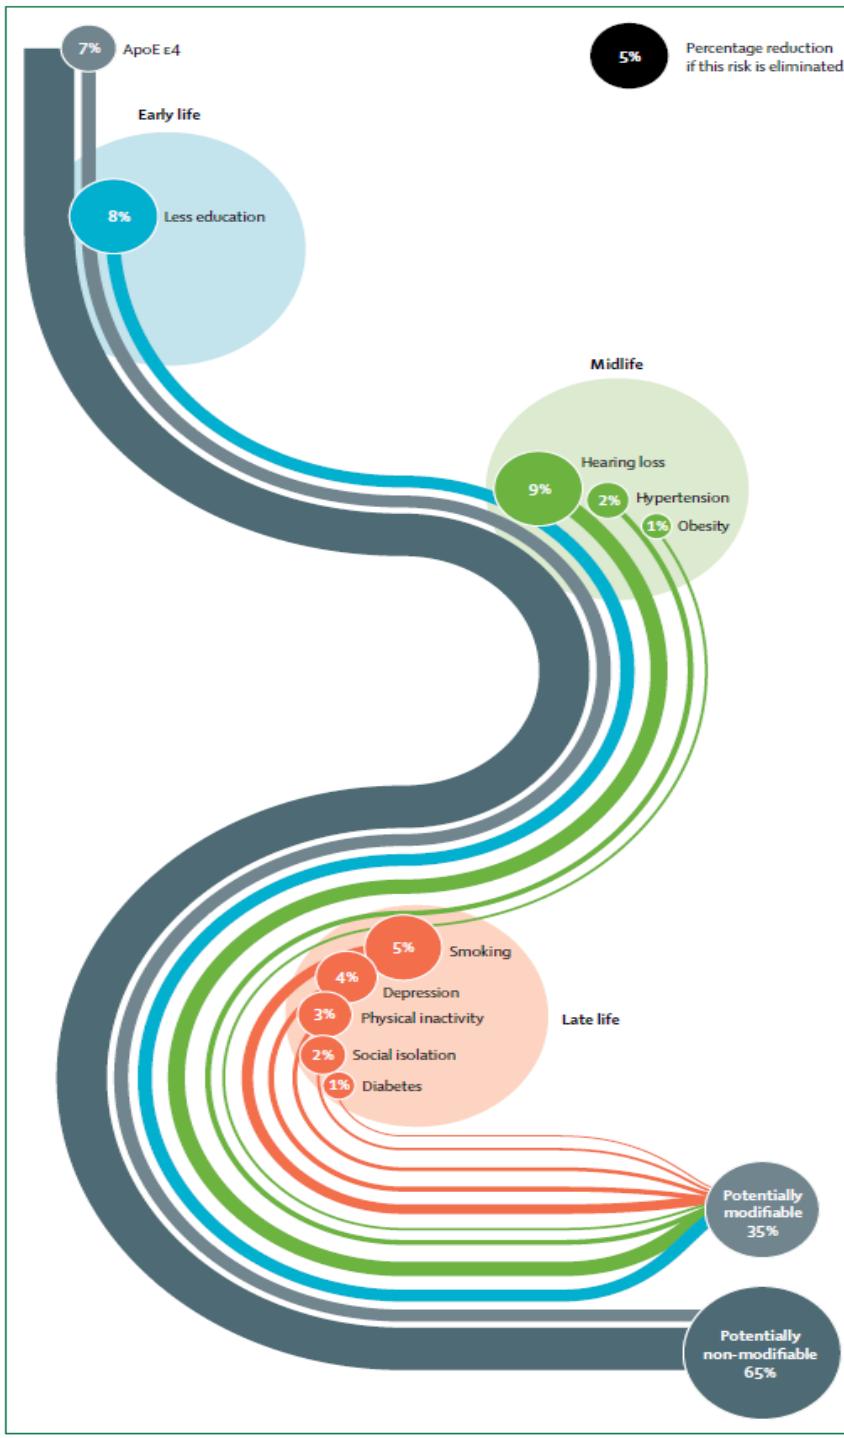

PREVALENS

- **10 mill personer med demens i Europe (2-4%)**
 - **45 mill personer i hele verden**
 - **131 mill i 2050**
 - **600 mill lever med demens i de neste 40 år**

Demens i Norge

- 78 000 personer demens i Norge/fordobles innen 35 år
- 5 000 er yngre enn 65 år
- 28 milliarder NOK i 2013/år
- 60 % av sykehjems-kostnader
- 20% er kostnader i eget hjem

UTSETT KOGNITIVE NEDGANG OG DEMENS

Før demens er et faktum

1. Utdanning
2. Aktivitet (mental, social, fysisk)
 - Familie, venner
 - Frivillighet
 - Mening med livet
 - Spiritualitet
3. Ernæring
4. Røyk, alkohol
5. Helse:
 - BT, diabetes, vekt
 - Hørsel
 - Søvn

NY GENERASJON

- [LIVE@Home.Path](#)
- TAR AVGJØRELSER

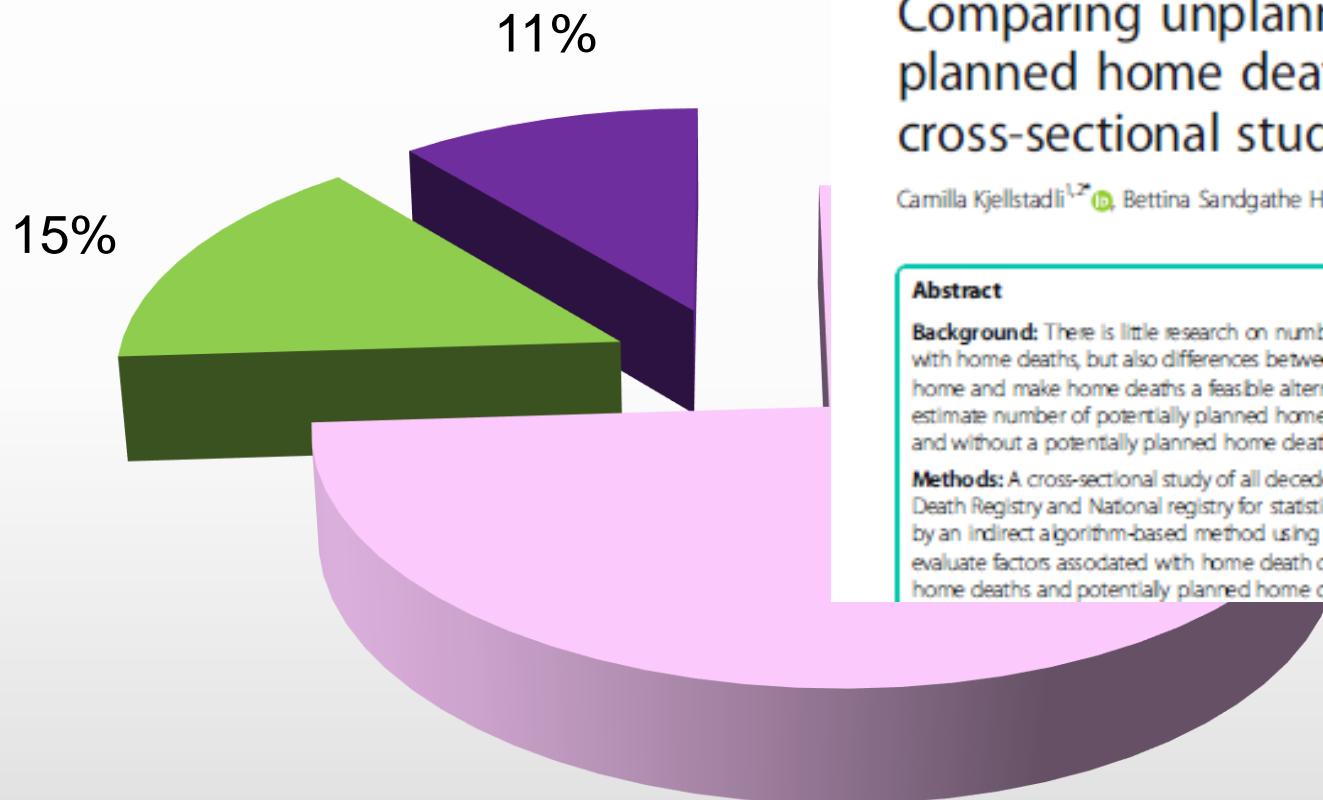

”Hjemme best”

- Mange ønsker å bli boende i egen bolig så lenge som mulig
- Helst hjemmebaserte tjenester, heller enn institusjon
- Trygghet, trivsel, sosial inkludering, aktiviteter
- Hverdagsrehabilitering

Eldre ønsker omsorgsteknologi

- Bli boende lenger hjemme, økt livskvalitet, opplevd nytteverdi
- Forbedring av helsetilstand; reduksjon i sykehusinnleggelse
- Noen etiske utfordringer
- Behov for evidens for effekt og kostnadseffektivitet
- Ikke tilpasset demens

Hvor ønsker vi å tilbringe døden?

Comparing unplanned and potentially planned home deaths: a population-based cross-sectional study

Camilla Kjellstadli^{1,2} , Bettina Sandgathe Husebø^{3,4}, Hogne Sandvik⁴, Elisabeth Flo⁵ and Steinar Hunskaar^{1,4}

Abstract

Background: There is little research on number of planned home deaths. We need information about factors associated with home deaths, but also differences between planned and unplanned home deaths to improve end-of-life-care at home and make home deaths a feasible alternative. Our aim was to investigate factors associated with home deaths, estimate number of potentially planned home deaths, and differences in individual characteristics between people with and without a potentially planned home death.

Methods: A cross-sectional study of all decedents in Norway in 2012 and 2013, using data from the Norwegian Cause of Death Registry and National registry for statistics on municipal health and care services. We defined planned home death by an indirect algorithm-based method using domiciliary care and diagnosis. We used logistic regression models to evaluate factors associated with home death compared with nursing home and hospital; and to compare unplanned home deaths and potentially planned home deaths.

Solberg lover GPS til demente

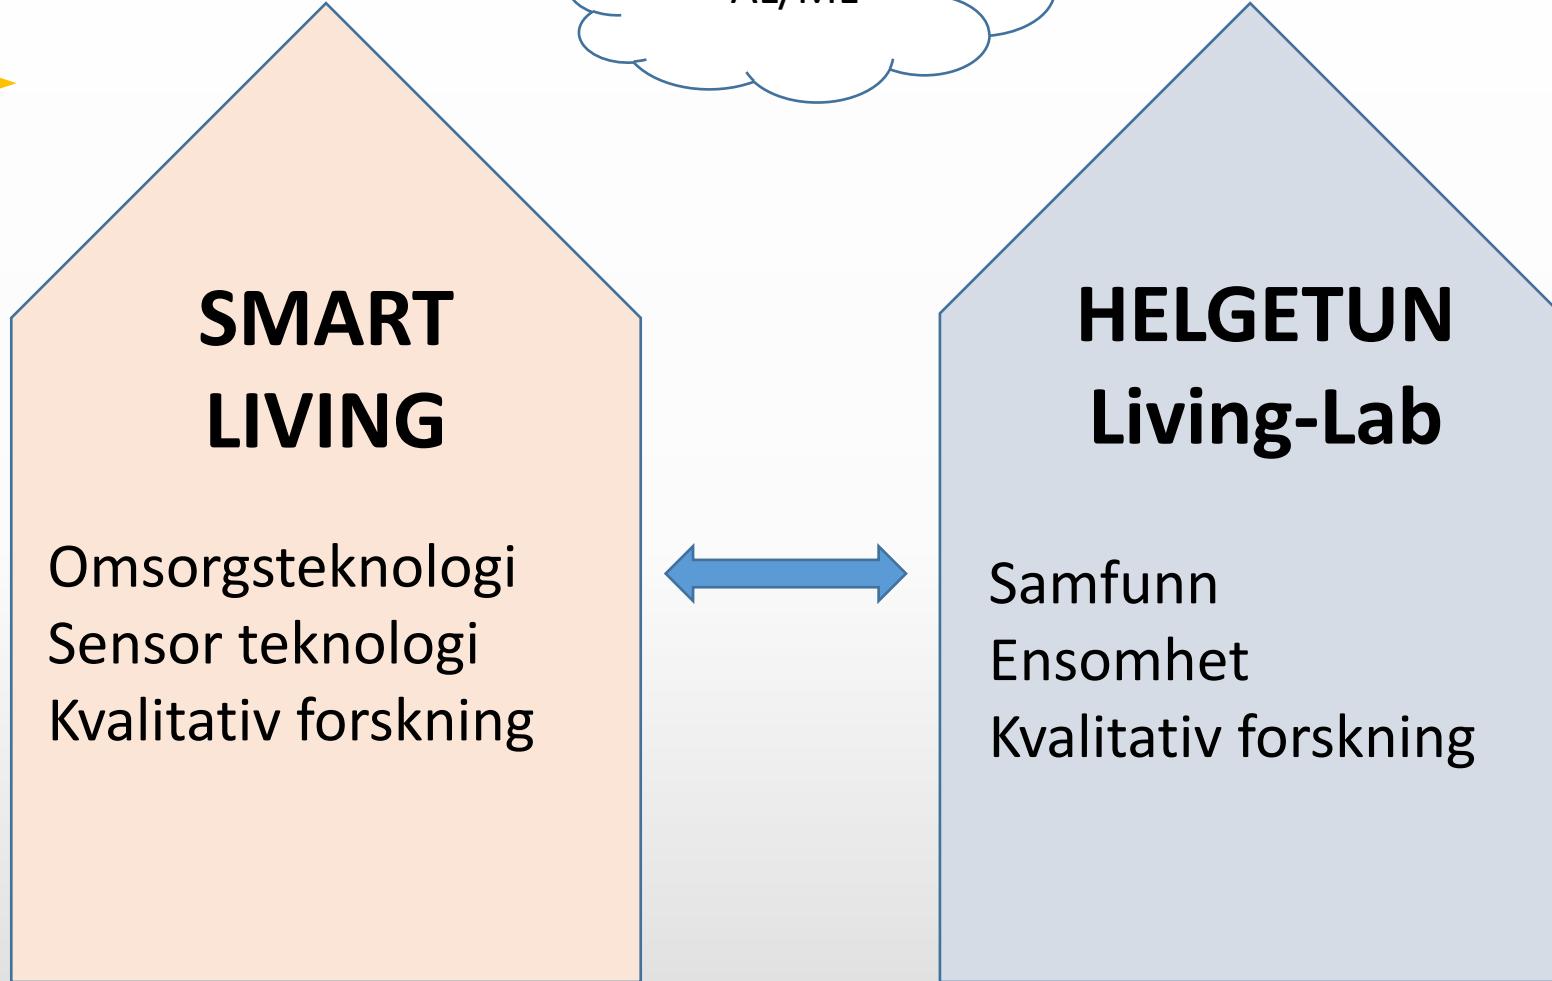

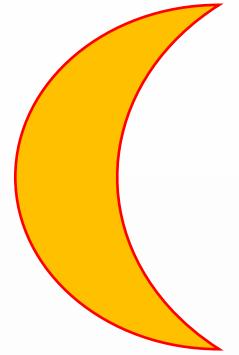

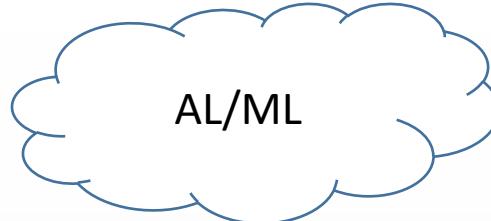

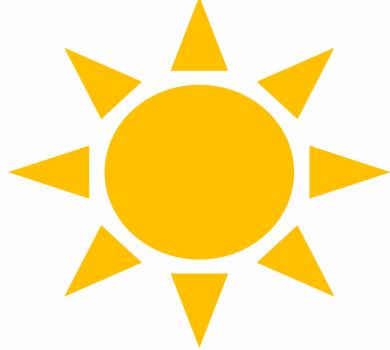

TRADISJONELL TEKNOLOGI

- 70% hjemme
- Komfyrvakt, trygghetsalarm
- Lite etterspørsel
- Eldre kvinner (83.3 år)
- Bor alene (61%)
- Har yngre (gutter) barn (64%)

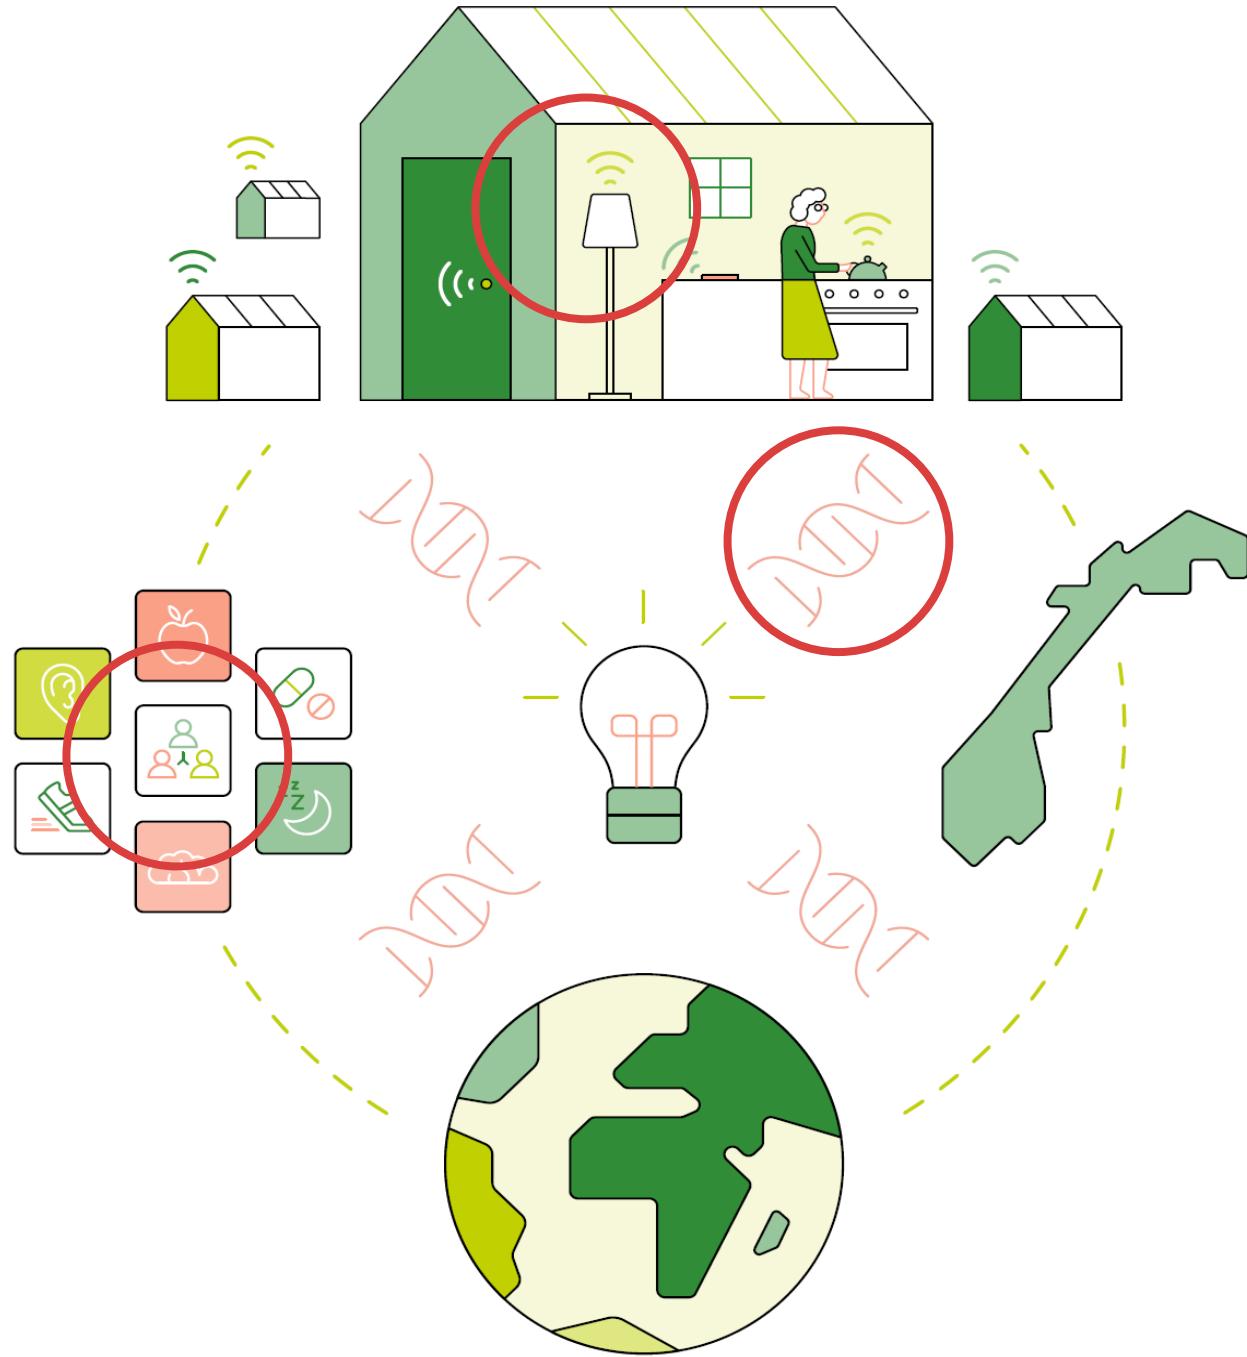

SENSOR TEKNOLOGI

- Sikkerhet; forebygging av ensomhet
- Digital phenotyping;
- Lite testet på effekt; validitet, små studier

Industri partnere – akademia – kommuner – brukerinvolvering
